

Differential Equations and Applied Math Seminar

Texas State University

5-6:20pm February 19, 2015

121 Derrick Hall

Speaker: Dr. Ivan Blank, Kansas State University

Title: An overview of some of the most famous free boundary problems

Abstract: I will give a rapid survey of some of the basic free boundary problems including the physical assumptions which lead to them, and some of their relationships with each other. I will also hopefully have time to discuss some of the basic results known for each.

Interested faculty and graduate students are encouraged to attend.
